A New Variety of Whitesbog Blueberry Plants

RANCOCAS—(Coville hybrid 1232 C), a variety recently selected and named by Dr. Coville. The fruit ripens slightly earlier than that of Rubel, which is one of its parents. The berries grow somewhat larger, are a trifle flatter and about the same color.

The original bush is about five feet high with slender graceful stems, amply strong to support the mass of blue fruit which makes it a thing of beauty each season.

Strong two-year-old nursery grown plants are offered for sale at the following prices.

1 plant, delivered \$2.50
10 plants, delivered \$22.00
